Everything in one place, all from a single source

Richard Brink presents new and established products at BAU 2023

Munich, 24.04.2023. The week got off to a perfect start for the construction industry: on 17 April, the exhibition grounds in Munich opened their doors for the latest edition of the BAU. The company Richard Brink was among the exhibitors at the world's leading trade fair for architecture, materials and systems. The metal products manufacturer presented a large selection of its products and solutions at the exhibition stand. This included a number of significant product innovations, which received a lot of attention specifically on the topic of sustainable construction.

Across an exhibition space of around 250 square metres, Richard Brink GmbH & Co. KG gave trade visitors a thorough and detailed look around its different product groups. From drainage and dewatering solutions to planting and roof systems right over to products designed for bathroom use – the exhibition stand in Hall B2 reflected the breadth of the company's product range. Similarly varied were the wishes and needs of visitors to the stand, which were met with the help and advice of the metal products team. Throughout the exhibition in Munich, the team were very much focused on engaging in personal exchanges and providing individual assistance.

New products for greener buildings

This focus was also felt during the architects tours organised by the Bauverlag publishing company. On two of the exhibition days, Managing Director Stefan Brink welcomed the guided groups to the stand and presented select product highlights in conversation with the architects and planners. Among other things, the spotlight was shone

on the two versions of the Adam living wall for façade planting. The wall's modular construction using 2mm-thick plant cassettes always ensures easy assembly, regardless of the amount of planting required. Three different substructures – one that fixes the wall directly to the façade using a top-hat rail, another that uses ground anchors, and a final version that draws on external wall insulation systems – all guarantee professional installation for both new and existing buildings. Each model ensures the continuous ventilation of the façade as enough space is left for air to circulate between the building's exterior and the planted cassettes. The Adam living wall is available both with a stepped design and in a design that sits flat against the façade.

And this isn't the only product innovation from Richard Brink to meet the demands placed on sustainability in construction: the manufacturer also presented three integrated systems for extensive planting on flat and sloping roofs. Varying in composition, the Easy, Terra and Bio systems satisfy all kinds of customer requirements and structural prerequisites. Depending on the version selected, the integrated systems are made up of root barrier foils, drain and water storage mats, substrates and sedum mats. As a finishing touch, each system is supplied with custom-made gravel stops and substrate rails together with the necessary amount of coarse gravel for the border areas. This provides customers with all the components they need to create extensive green roofs from a single source.

Always the right solution

Both the new and time-proven products attracted a huge number of visitors to the Richard Brink stand, which speaks to the significance of the BAU. "After six intense days, we can absolutely look back on a successful trade fair and a stand that was well frequented throughout. We noted a clear trend particularly in the quality of consultation sessions: visitors have an increasingly specific idea of what they expect

from certain products and solutions for their building project. This means our experienced team can get straight to discussing the details. Moreover, by drawing on our broad range of standard products and our many years of know-how in the field of custom solutions, we're able to make any individual preference a reality," concludes Managing Director Stefan Brink.

(approx. 4,030 characters)

The products from the family company, which was founded in 1976, range from dewatering and drainage systems, gravel stops, edging solutions, lawn edgings and edge profiles to wall covers, plant boxes, solar substructures, chimney caps and weathervanes. Find more information at www.richard-brink.de.

Its sister company, Brink Systembau GmbH, is specialised in the trade fair and exhibition business and sells flexible modular construction systems produced by Richard Brink and used, for example, as trade fair walls. They are also suitable for other applications, such as machine enclosures, noise protection, partition walls or display cases. The product range further includes large-scale LED poster displays. These eye-catching displays grab attention even from a distance.
