A big brother for your custom vegetation concept

Richard Brink presents Clarus, an enhancement of the Basio plant box

Schloß Holte-Stukenbrock, 11/01/2024. The broad range of plant boxes from Richard Brink, the metal products manufacturer, offers customers a wide range of exterior design options. The company recently launched Basio, a compact solution in a monolithic design. This is now joined by the new Clarus, creating even broader choice: this new variant, which is always made to measure, is available in custom dimensions and comes in a range of materials.

When it comes to adding greenery to outdoor spaces such as balconies, terraces, gardens or building entrances, there are as many solutions on the market as there are individual tastes. Richard Brink's planting systems have established the company as a manufacturer of high-quality and individual products over recent years. Alongside bespoke raised beds, plant boxes are currently very popular thanks to their flexible installation options and wide range of designs. Recent highlights include the Modular range, which can be configured online, and the compact Basio variants in a square or rectangular design.

Every plant box is one of a kind

These Basio variants share DNA with the new Clarus plant box. Clarus is an extension of Basio and could be called its big brother. Once again, the monolithic Clarus impresses with its fully watertight welded design with no visible welding seams and sets a visual accent while also making it almost impossible for dirty water to escape. As such, it is also ideal for use in indoor spaces. An internal nozzle with a length of 80mm and a diameter of 50mm guarantees the controlled drainage of excess irrigation water or precipitation. While Basio is exclusively available in

Product information

compact and predefined designs, the new product is always custom-made in line with project-specific requirements. The material used for Clarus also offers plenty of scope to flex your own design muscles: the plant box is available in corten steel, stainless steel or coated aluminium in all RAL colours, each available from a material thickness of 3mm. The upper backward bend is 40 x 35mm.

By expanding its range, Richard Brink has created further flexibility for its customers in designing outdoor areas, enabling large-scale versions of the popular monolithic plant boxes in a range of materials to be installed.

(approx. 2,700 characters)

The products from the family company, which was founded in 1976, range from dewatering and drainage systems, gravel stops, edging solutions, lawn edgings and edge profiles to wall covers, plant boxes, solar substructures, chimney caps and weathervanes. Find more information at www.richard-brink.de.

Its sister company, Brink Systembau GmbH, is specialised in the trade fair and exhibition business and sells flexible modular construction systems produced by Richard Brink and used, for example, as trade fair walls. They are also suitable for other applications, such as machine enclosures, noise protection, partition walls or display cases. The product range further includes large-scale LED poster displays. These eye-catching displays grab attention even from a distance.
