Richard Brink has expanded its range of products to include a new solar fence developed in-house. The panels act not only as privacy and partition elements but also as a green power source.

Stainless-steel fence posts featuring integrated cable channels as well as clamp mounts that hold the modules securely in place while preventing damage to their surface are supplied with the panels.

The metal products manufacturer from Eastern Westphalia provides tailor-made covers for the back of the panels that render the cables practically invisible and prevent heat accumulation thanks to the integrated ventilation slots.
