The fence that lets in nothing but the sun

Richard Brink presents new solar fence

Schloss Holte-Stukenbrock, 25.08.2025

Today's photovoltaic systems are by no means limited to building roofs. A general awareness of the energy transition has taken root, which has led to solar energy being fed into the grid also increasingly on a smaller scale in the form of balcony power plants. Richard Brink goes one step further here, with the company now offering individually extendible solar fences as part of its product portfolio.

Solar fence panels provide a special kind of privacy screen: they combine their conventional use as a partition element with the option to sustainably generate energy. With its recently unveiled in-house models, the company Richard Brink provides plenty of scope for individual design concepts and installation scenarios, such as the choice between a vertical or horizontal orientation of the solar modules. This opens up various possibilities for sustainable energy generation along garden and property lines in private and public settings alike.

Clever system from base to grid

The solar modules are fixed between the respective fence posts, which give the solution a stable basis. The posts feature clamp mounts that hold the modules securely in place while preventing damage to their surface. The high-quality stainless-steel constructions impress with their matt blasted surface, presenting the perfect counterpart to the dark solar panels both technically and visually. The feet with flange plates in the base section make the fence extra stable, weather-resistant and durable. The posts can be screwed into

Product information

either a point or strip foundation at their feet. Alternatively, the screw plates can also be set directly in the foundation.

In place of the 450-watt solar modules, customers can choose to insert high-quality stainless-steel panels between the fence posts as partition elements. These also function as made-to-measure fitting pieces used to achieve the exact fence length required at the installation site. Besides this, the back of the solar modules can be fitted with bespoke stainless-steel covers that feature ventilation slots to prevent heat accumulation. The optional rear cover almost completely conceals the cables, which run through the cable channels integrated into the fence posts as standard, and make for a clean appearance.

With its solar fence, Richard Brink GmbH & Co. KG provides a comprehensive complete package comprising posts with the respective mounts, solar modules, compatible microinverters and cables, as well as optional fitting pieces and rear covers, all of which come ready for installation. On request, modules provided by other manufacturers in different sizes can also be accommodated using the clamp holders. For plug-and-play solar installations used in the same way as a balcony power plant, up to two modules can be series-connected; if several modules are to be connected in a series, the metal products manufacturer recommends hiring trained professionals.

(approx. 3,030 characters)

Richard Brink is a medium-sized family-run company from Eastern Westphalia, now managed by the second generation. Over its 45-year history, the company has established itself on the market as an expert in metalware production. From product development and construction through manufacturing right up to advice and sales, the company manages and takes ownership of all processes in-house.

Product information

The product range comprises drainage and dewatering solutions, planting systems along with solutions for roof and wall areas, industrial applications, bathrooms and kitchens. Made-to-measure and custom-made products round off the comprehensive standard product range from the metal products manufacturer. Find more information at www.richard-brink.de.

Its sister company, Brink Systembau GmbH, is specialised in the trade fair and exhibition business and sells for instance flexible modular construction systems produced by Richard Brink GmbH & Co. KG. Additional products include fully back-lit LED illuminated walls or parcel lockers as a secure drop-off location for personal and commercial goods deliveries.
