Custom products at standard prices

A recipe for success at Richard Brink

Schloss Holte-Stukenbrock, 22.01.2026

As a metal products manufacturer, Richard Brink GmbH & Co. KG plays a key role in ensuring construction projects of various sizes run smoothly. The family-run company takes on this responsibility, among other things, by providing goods that are made-to-measure yet still manufactured and delivered with a fast turnaround time and often even at standard prices. Customers therefore benefit from easier assembly and a coordinated look, with guaranteed “Made in Germany” quality.

Regardless of scale, everyone involved in a construction project wants the project to run smoothly – from the building contractor to the planner right over to the companies carrying out the work on site. If agreed deadlines are missed in one area, a string of delays ensues. This can result in the need for extra organisational effort and significant additional expenses. Hence the importance of avoiding these types of complications also beyond traditional standard solutions, when a client might be looking for bespoke custom components.

Custom-made products across the entire portfolio

Richard Brink specialises in precisely these types of situations, primarily for drainage and dewatering systems. What makes its approach so unique is the fact that, for a large part of this product group, the metal products company manufactures bespoke articles at standard prices while still maintaining short lead times. The prices of custom dimensions are determined by the next-largest standard dimensions listed in the respective product catalogue. If, for example, a custom inlet width of 150mm is required and the channel in question comes with standard inlet widths of 140mm and 160mm, the price

of the 160mm-wide channel will be calculated. “We can also manufacture made-to-measure curved variants to meet every requirement. What’s more, for projects of a certain size, we can implement entirely bespoke design requests that go beyond our existing assortment of drainage and dewatering systems,” comments Managing Director Stefan Brink. All channels and corresponding grating covers slot seamlessly into every design concept. Thanks to an additional BIM database available on Richard Brink’s website, the end results can be precisely visualised before an order is placed.

In other product areas, the family-run company from Eastern Westphalia offers articles that can only be ordered as bespoke designs in line with project specifications. This is the case, for instance, with the Semira raised beds and Cavor parapet coverings. The customer benefits are clear: the tailor-made prefabricated components facilitate installation, which in turn saves time and effort on the construction site. In times shaped by a shortage of skilled workers, exactly these types of products, designed to reduce the amount of time and effort required on site, are especially sought after by tradespeople. Richard Brink GmbH & Co. KG works to the highest quality standards true to the motto “Custom production is our norm”. Thanks to the company’s many years of experience with custom-made products, customers can count on precise production that meets the relevant specifications while still ensuring fast turnaround times.

made products round off the comprehensive standard product range from the metal products manufacturer. Find more information at www.richard-brink.de.

Its sister company, Brink Systembau GmbH, is specialised in the trade fair and exhibition business and sells for instance flexible modular construction systems produced by Richard Brink GmbH & Co. KG. Additional products include fully back-lit LED illuminated walls or parcel lockers as a secure drop-off location for personal and commercial goods deliveries.
