Product description

Made entirely of 2 mm Corten steel, this planter box looks like a monolithic cuboid thanks to its seamless welded joints. It offers protection against frost and drying out. The Basio can be lined from the inside with 20 mm thick Styrodur as required (not included). This provides the plants with optimal insulation, which equally protects against frost and drying out. The base plate has a hole for water drainage. The planter box is intended exclusively for outdoor use. It is available in a square or rectangular basic shape.

Processing and care instructions

Dust particles of other metals or general cutting of components with flying sparks on the product are generally to be avoided. If dust particles or soiling of other metals are present, these must be removed immediately with appropriate cleaning agents.

Cleaning the planter boxes must not be done with strong acids or bases, but by hand with a broom or, if necessary, with a high-pressure cleaner.

Further installation & usage instructions as well as information on the material can be found under:
