

Technical data sheet

Planter Boxes with Planter Trough

Manufacturer

Richard Brink GmbH & Co KG
Metal goods manufacture and distribution
Görlitzer Str. 1
33758 Schloß Holte-Stukenbrock
Phone: 0049 (0)5207 9504-0
Fax: 0049 (0)5207 9504-20

Status: 02/22

Product description

The planter boxes with insertable plant troughs are a double-walled construction with separately insertable troughs. Plants are optimally protected from frost and drying out. The insulating layer of air between the planter box and the trough effectively keeps out heat and cold. The plant troughs are easy to remove thanks to the retractable handles. The troughs are available in stainless steel and hot-dip galvanised steel.

Dimensions (for both materials)

Height	Wide	Depth	Material thickness
500 mm	500 mm	500 mm	1.50 mm
1000 mm	500 mm	500 mm	1.50 mm
500 mm	500 mm	1000 mm	1.50 mm

Custom-made products are available on request.

Materials used

We use only European material from Germany, Sweden, France and Italy for our planter boxes. A coloured coating is possible on customer request.

Processing and care instructions

In principle, care should be taken when using the planter boxes in all materials.

Dust particles of other metals or general cutting of components with flying sparks onto the product should generally be avoided, as the surfaces of all materials are very sensitive. If dust particles or soiling of other metals are present, these must be removed immediately with appropriate cleaning agents.

In order to maintain the outer appearance of the planter boxes in the long term, regular cleaning is generally recommended. The stainless steel and hot-dip galvanised steel planter boxes should be cleaned by hand using suitable, non-abrasive cleaning agents.

Further installation & usage instructions as well as information on the material can be found under:
