

Raised beds

for even more greenery!

Raised beds create **green islands** in a sea of grey.

Raised beds are becoming increasingly popular, and not just in private gardens. In urban spaces in particular, they create

green islands

that quite literally stand out from the expanse of dull paving slabs and asphalt. The beds break up sealed surfaces, making them more permeable to precipitation.

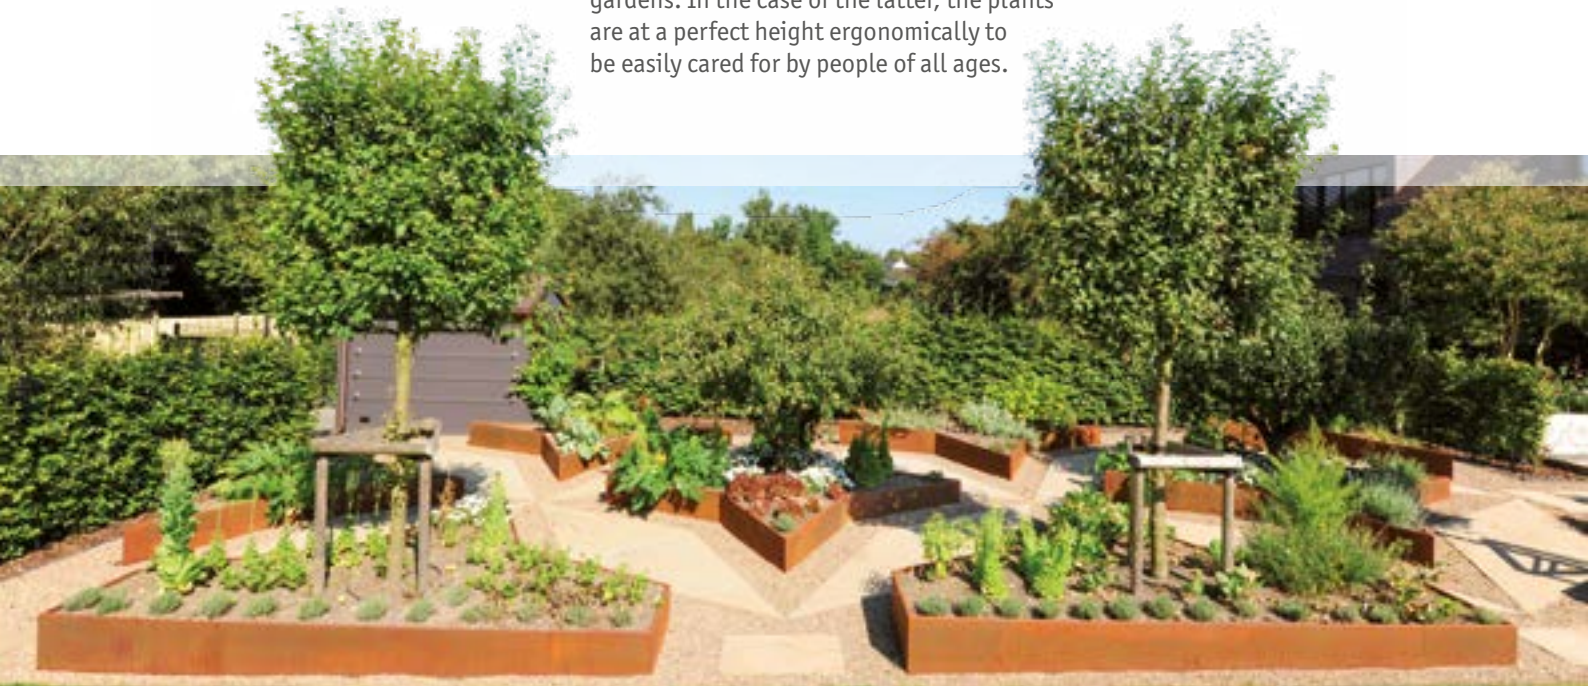

Raised beds are the foundation walls for green spaces!

They help bring structure to adjacent areas such as car parks, residential quarters, park grounds, gardens and many other public and private spaces. They can be used as plantable dividing elements on properties and terraced areas, or as kitchen and herb gardens. In the case of the latter, the plants are at a perfect height ergonomically to be easily cared for by people of all ages.

Raised beds for roof planting open up new possibilities for flora and fauna. Even trees can be planted depending on the building and its structural stability –
a canopy of leaves over the city's rooftops.

The example on this page shows the Volksbank branch in Freiburg im Breisgau. Besides the planted courtyard located on the first floor roof, all roof levels feature planting systems from the company Richard Brink. The installed raised beds are also fitted with wooden benches.

The Zollverein Coal Mine Industrial Complex in Essen is not only an industrial monument and UNESCO world heritage site, but also an exciting repurposing project. Newly built structures such as the Zollverein Foundation's car park, which is sunken into the ground, make use of otherwise unused spaces without detracting from the area's original character.

A little outdoor

Raised beds are designed not only to showcase plants, but also to create little

outdoor havens.

The integrated wooden benches offer a whole new perspective thanks to their installation at plant height, allowing the surrounding greenery to be taken in at eye level.

Create recreational areas by installing green oases on rooftops, in entrance areas and courtyards as well as on terraces. Our raised beds transform green spaces into open-air break rooms.

Beds with integrated seating also enhance park areas, offering a spot to sit and relax. The beds and seating areas can be designed as geometric or organic structures in line with customer specifications.

or **haven!**

The oxygen enrichment and air humidification properties of indoor planting improve air quality and give buildings a *“green lung”*.

Also for indoor

planting!

Raised beds or plant boxes – that is the question. We produce raised beds for indoor assembly complete with base panels that fit the large-scale planters. We also offer these models in custom sizes, giving even trees plenty of room to thrive.
